ITUDDIT

Team: Tianyu Liang, Xiao Han, Minal Bhole, Po Wei Cheng

Background:
The EMS system has a discussion session which is very raw and not easy to interact with. We think we can improve that by making a reddit-like forum app, users could post a topic, the topic could be questions or thoughts, others can easily reply/upvote/view all the posts in the topic.

Goal:
Make a reddit-like forum app with core functions working and deploy it to train-liang.com.

ITUDDIT core function:

User sign-up/log-in

User post a topic

User reply/upvote a topic

ITUDDIT other features:

User creates a group

User joins a group

User follows other users

Technology Stack:

Front-end: Angular

Back-end: Django Framework

Agile collaboration tool: Trello

Version control: Github
